

# Precision mechanic

## Area of specialisation: tool making

You are good at using your hands?  
You are looking for a challenge as a high-precision toolmaker?  
You are looking for a career with good future prospects?

**Then do your vocational training in an innovative workshop**

### Your vocational training

From filing, grinding, lathing and machining through to final assembly of the tools – you will be trained by us in the full range of metal working techniques.

In addition you will also receive training on ultra-modern machining equipment – CNC-milling, HSC-milling, die-sink or wire-cut electrical discharge machining.

### Your pre-requisites and interests

If you have a good school leaving certificate or an intermediate school leaving certificate with good results in natural science subjects, manual dexterity and an interest in technical work – then you are in exactly the right place with us.

The vocational training as a precision mechanic in tool-making takes place jointly in the workshop and at a vocational college.

It takes 3.5 years to complete.

After the training programme, there will be a multitude of possibilities for further qualification available to you.

***You feel that you match the required profile? Then don't miss this opportunity.***

We look forward to receiving your complete, informative application by mail or by email to: [bewerber@ermet.de](mailto:bewerber@ermet.de)
